

Design Philosophy: Engineering with Purpose

Inspiration from Cars

My passion for mechanical engineering is deeply inspired by automobiles – their complexity, elegance, and functionality.

Serviceability as a Priority

One key area I focus on is the design for serviceability mindset, which varies significantly across Tier 1 suppliers. I aim to create solutions that are intuitive and efficient for maintenance and repair.

Sustainable Engineering

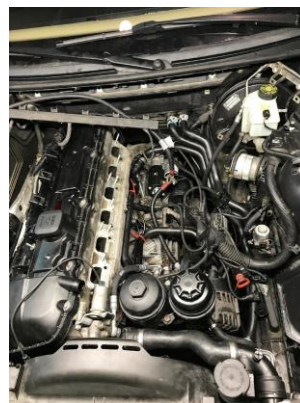

I'm driven to design with the least impact on nature. My goal is to leave only footprints – ensuring every product respects and preserves the environment.
